

Company profile of

Industrial supplies

- Sourcing and supplying of quality products
- Mining equipment
- Industrial tyres
- PPE
- Customised

Security systems

- Video surveillance systems
- DVR systems with remote Internet viewing
- Pre-configured and easy to install

Access control

- Thorough planning and installation
- Wide range of access control systems and solutions
- Biometric readers
- RFID

Gate automation

- Automation range for swing gates
- Sophisticated design
- Solid and reliable mechanics
- 24V and 230V versions

Introduction

Our history

Faila started out seven years ago as Kentia Trading. Today, after a successful restructure, it is one of the most progressive enterprises in the safety and surveillance industry in Africa.

Areas of expertise

Our expertise lies in the following areas:

Our philosophy

Vision

We strive to be the most trusted supplier in Africa of quality industrial, safety and surveillance products and services.

Mission

Through innovation and dedication to our customers, we make sure in everything we do that our everyday service distinguishes us from our competitors.

Values

Our performance-oriented culture and responsible approach form the foundations of our success. We recognise that our business depends on our creativity, dedication and performance.

You name it, we'll supply it

Whatever industrial supplies or security systems you need – we will deliver first time, on time, every time. It is our objective to be the leading supplier of the full range of products that mining and other companies or individuals anywhere in Africa may need, whether it be jumbo drill rigs, mobile surveillance systems using Apple or Android devices, or biometric (fingerprint etc.) access control solutions.

What we do

Products

With offices based in Johannesburg (South Africa) and the Democratic Republic of Congo, Faila has continued to evolve as a company proudly servicing and supporting from the smallest to the largest mining and industrial companies throughout Africa.

We have accomplished this by not only supplying, manufacturing, installing and maintaining quality products – we also take the time to listen to our customers and help them find solutions to their specific needs.

We owe our proud track record to the support of our many faithful customers and will honour their loyalty by keeping up the strong core values on which we have delivered thus far.

Industrial supplies

Our industrial supplies offering includes mining equipment, industrial tyres, structural and construction materials, personal protective equipment (PPE) and branded corporate clothing.

Mining equipment

Faila specialises in the supply of quality underground mobile mining and tunneling equipment. From specifically designed pieces to remanufactured equipment, our engineers keep us at the cutting edge of the industry. Each unit is sourced, custom-built or remanufactured to suit our clients and their working environments – we distinguish ourselves by being able to deliver customised concepts and solutions that meet our clients' exact needs.

Our products include, but are not limited to:

- Mining pumps and valves
- LHDs
- Underground loaders
- Narrow vein equipment
- Jumbo drill rigs
- Scissor lifts
- Flatbed boom trucks
- Fuel and lube trucks
- Bolters
- Underground trucks

"We deliver customised solutions for any mining application"

We specialise in high-head dewatering pumps.

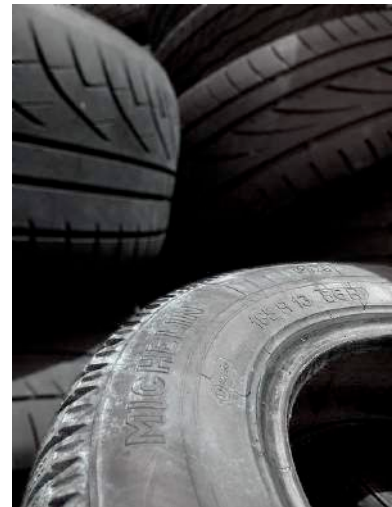

Our new innovative CD4 duplex metal volutes, shafts, and impellers deliver increased solids handling capability.

Our self-priming pumps, with an impressive suction capability of 28 feet and head of up to 800 feet, are ideally suited for dewatering the toughest mining applications.

Our products are used successfully in long-wall, traditional pier-and-beam, pit, and strip-mining applications.

Industrial tyres

We supply a wide range of Michelin industrial tyres – designed to meet the requirements of safety, robustness and productivity on industrial sites. Thanks to their radial technology, Michelin tyres last longer than their competitors. They are also more reliable, with better resistance to the numerous knocks and impacts which can occur on the rugged surfaces of industrial sites. Michelin technology also guarantees greater safety for machine operators, their machines and the goods they carry, and does less damage to working surfaces.

Michelin is the first manufacturer to offer tubeless radial tyres (tyres with no inner tube) for industrial application. With their exclusive airtight tubeless bead seal system, safety is maximised. The service life of the tyre is markedly better than that of the competition, and in the unlikely event of the tyre being penetrated by a nail or similar object, there is no rapid loss of pressure.

PPE

At Faila, we are always ready to make sure you're ready for what's next.

We have a legacy and on-going vision of introducing new PPE products and services — always designed to ensure the health, safety and performance of on-site personnel. The game-changing innovations in our PPE product range are designed to best prepare clients for the new dangers and hazards they face each day.

Electrical and electronic security systems

We design, supply, install, configure and maintain an extensive range of electrical and electronic security systems, ranging from electronic access control to CCTV surveillance systems, alarm systems, gate motors and electric fencing to fire detector systems and more.

Security systems

There is an ever-growing need to secure both one's business premises and one's private property against the escalating incidence of criminal activities in our society. Today's sophisticated security systems are based on a three-pronged approach: identification, authentication and authorisation. We can leverage your existing network and security equipment investment to bring you up to date with the latest technology available.

Faila is a direct supplier of security cameras and video surveillance systems for home, business and government application. In addition to CCTV (closed-circuit television) cameras and systems, we also sell network IP cameras, HD-SDI cameras, and a vast range of video surveillance accessories. Surveillance cameras and DVR systems with remote Internet viewing is our specialty. Most of our surveillance systems include DVR viewer software for Windows and Mac PCs, as well as mobile surveillance viewer apps for iPhone, iPad, and Android devices. We sell a wide variety of complete systems that are pre-configured and easy to install.

Faila distinguishes itself by providing the best possible customer service and technical support in the industry. We also strive to provide the most competitive pricing on surveillance systems, security cameras, NUUO surveillance equipment, and Geovision DVR cards.

- *Surveillance cameras (CCTV)*
- *Access control systems*
- *Gate automation*
- *Alarm systems*
- *Fire detection systems*
- *Electrical works*
- *Intercoms*
- *Electric fencing*
- *Installation of data and telephone cables*

Access control

Access control should enable one to refuse access to unauthorised persons, with the least possible impediment to the freedom of movement of authorised persons. This is how we understand access control. Therefore the thorough planning and careful installation of your access control system is mandatory.

Our Kaba range offers a wide selection of access control solutions that support current RFID standards such as LEGIC prime/advant and MIFARE Classic/DESFire. An interesting alternative is biometric solutions, where a person's finger is used as a biometric attribute to gain access.

For those enterprises with higher than usual security demands, biometric readers can be combined with RFID.

Every company should ask itself the question: Who is authorised to be where, and when?

Gate automation

Enjoy the security, comfort and convenience of an automated gate, whether at home or at your business premises. Faila's gate automation solutions are differentiated by a sophisticated design, supported by solid and reliable mechanics.

Our automation motors are available in 24V and 230V versions for regular applications, and a 24V version for more intensive use. Our Hermes range is suitable for doors with a maximum size of 2 meters, while the Ulixes range is designed for swing gates of medium to large size (3.5 – 5m per leaf). The Alpheo range with its articulated arm is suitable for wooden, aluminum or other doors with protruding pillars, and the Zefiro underground range is available in two versions, depending on the size of the doors.

Supply, installation, commissioning, configuration and maintenance

Faila provides a turnkey solution to any industrial, safety or surveillance requirement, from the supply and customisation of the product to its installation, commissioning, configuration and maintenance.

We meet with clients to assess and advise on their exact requirements, whereafter we design and source a suitable solution, customised where necessary to fit the client's particular situation. Thereafter, our expert installation teams install, commission and configure the product to the client's satisfaction.

Equally important as a flawless installation is follow-up maintenance, and we excel in keeping clients satisfied by ensuring the continued smooth operation of their product according to the specifications.

Customers and projects

Faila has completed or is in the process of completing the following installations:

Data and telephone points, and fire and intruder detection systems at the Kagiso and Aberton libraries for Sibanda Construction
